OSEMEMEN OGBE

Full-stack Developer

I am a Turing-certified full-stack developer with 3-years of professional working experience in web development.

Proficient in: PHP, Laravel, Vue.js, Nuxt.js, MySQL and UI frameworks (Bootstrap, Tailwindcss, Element)

Familiar with: Node.js, Python, Mongo DB

As an eager learner, I strive to stay up-to-date with new trends in web development. In addition, I am skilled at googling, seeking help from online communities, multi-tasking, independent problem solving and I possess excellent communication skills while working on team projects. Thus far in my tech career, I have built a few production-ready web applications for clients in varying niches.

FULL-STACK DEVELOPER

Reimnet

REIMNET is a web and mobile app development company specializing in delivering innovative and scalable technology solutions.

Projects:

1. LifestyleHub (https://lsh.cp.reimnet.com) is an affiliation marketing system that provides marketing and prospecting resources as well as analytics to monitor all promotional activities for a real-estate venture.

I developed the back-end with Laravel and MySQL as the database solution. I also provided REST API endpoints with documentation for the front-end and mobile developers.

Some of the app features include a referral system,

Vue.js

Nuxt.js

Inertia.js

JavaScript

Web API

Web RTC

GraphQL

Bootstrap

Tailwindcss

Git

Node.js

Python

Mongo DB

REST API

Docker

HTML 5

CSS 3

Unit Testing

Feature Testing

email/database notifications, reports, messaging and wallet system.

The project has been signed of as completed by the client and data migration from the old web application to the new is ongoing.

Skills: PHP, Laravel, MySQL, Git

2. Hire4Africa (https://hire4africa.com) is an online recruitment platform for financial/accounting professionals in Africa.

I developed the back-end with Laravel, used MySQL as the database solution and provided API endpoints for the front-end developer. I also integrated various third-party services such as Google reCaptcha v2 and an online payment processor, Paystack.

Some of the web app features include job filters, best talent matches, multi-package recurring billing system, in-app and email notifications, online payment, etc.

Project Completed.

Skills: PHP, Laravel, MySQL, Git, Third party APIs

3. TheArtVille (https://theartville.com) is an e-commerce website for African art: paintings, crafts, photographs, metal works and sculptures. It also has an events page and blog system within the website.

I developed the back-end with Laravel and front-end with Blade and Vue.js. I employed local storage and Vuex for state management of logged in users and cart system and integrated Paystack for

accepting payments on checkout. The e-commerce system and admin hub is powered by Lunar (previously called GetCandy) with features provided for products, carts, orders, payments, shipping, search and so much more.

The e-commerce site is live with art products available for sale and shipping options to customers available.

Skills: PHP, Laravel, MySQL, Vue.js, Vuex, SASS, Git, Third party APIs

4. SuezElectric (https://suezelectric.com) is a platform for purchasing electricity units. I developed new features on the web app including a revised agent commission module, modifying the existing wallet system to include a bonus wallet and a completely new promotional module.

I developed the back-end with Laravel and front-end with Vue.js. I also implemented Paystack and Providus Bank Virtual Payment Service APIs and webhooks for credit/debit card payments and bank transfers respectively.

SuezElectric services are currently in use by hundreds of Nigerians and the company processes tens of millions of Naira worth of transactions annually.

Skills: PHP, Laravel, MySQL, Vue.js, Git, Third party APIs

BACK-END DEVELOPER

Sekani-Tech

Sekani-Tech is a startup in the financial solutions tech-space. I built on existing features of Sekani Systems – a SaaS cloud-based core banking application.

The back-end is developed using core-PHP and is in use by a few microfinance banks in Nigeria. I added new features to the customer service, accounting, single and group loans and report modules of the Sekani-Systems. Among the features included are a client transaction reversal system, inventory/cheque and pass book posting, client reports, loan account reports, financial reports and fixed deposit reports. Such reports are downloadable in PDF and Excel formats.

The company was able to launch the software in about 6 months and acquired a few microfinance institutions. Clients reported that the system was of great help to their daily activities and helped provide concise and accurate loan and financial reports.
